

M165

Hemiplegia Simulation Suit

M165-1 M Size M165-2 L Size

- Weight/About 3kg
- Accessories/Shoes, Ankle equipment, Knee equipment, Wrist equipment, Cane, Storage bag

Can realistically learn the inconvenience of hemiplegia only understandable through experience.

Feature

- Can experience both right or left hemiplegia. <the sleeve / equipment (ankle / knee / wrist) can be attached to either right or left side.>
- Each equipment is fixed so that one can experience a similar condition to having stiff joints due to hemiplegia, but by using the rubber belt, it is possible to adjust tightness. (So that one can cope with an unexpected occurrence while experimenting, we have left some room.)
- The cane is useful for various movements, and the necessity of it will be strongly felt.
- The shoes were actually designed / developed for the aged and physically disabled. We have adopted these light and hard-to-slip shoes.
- It comes with a bag and is compact, so carrying and storing is easy.
- The suit (jacket) is washable and therefore clean.

Practice

Walking

- The irritation and fear of not being able to cross a pedestrians' crossing quickly
- The necessity of a cane when walking
- The fear of being in a crowd

Climbing

- The difficulty of climbing up and down steps
- The difficulty and anxiety of getting on and off buses / trains / cars
- The difficulty of standing up and sitting down for use of toilet etc.
